Agilent PNA Microwave Network Analyzers

PNA Network Analyzers: E8362/3/4B, E8361A
10 MHz to 20, 40, 50, 67, or 110 GHz

PNA-L Network Analyzers: N5230A
300 kHz to 6, 13.5, or 20 GHz
10 MHz to 20, 40, or 50 GHz

PNA-X Network Analyzers: N5242A
10 MHz to 26.5 GHz

The standard in microwave network analysis

Agilent Technologies
Welcome to the world of PNAs – 
The most popular microwave network analyzers

The PNA Series builds on Agilent’s 40-year legacy of excellence to deliver new standards in speed, accuracy, and versatility for microwave network analysis. The PNA’s architecture includes high quality, stable hardware and flexible software. The standard PNA is suitable for testing passive and active devices such as filters and amplifiers. Users can easily add options to test mixers, harmonics, intermodulation distortion (IMD), pulsed-RF, antennas and millimeter-wave (mmwave) components.

Key features
- Excellent performance
  - High dynamic range: 127 dB at 20 GHz at test port
  - Low trace noise: 0.002 dB rms at 1 kHz bandwidth
  - Fast measurement speed: 4.5 to 26 µsec/point
  - High stability: 0.05 dB/degrees Celsius
- State-of-the-art calibration capabilities and wide-range of ECal modules
- Advanced applications for mixer and pulse measurements
- Single-ended and balanced measurements
- 32 measurement channels, unlimited traces, and 16,001 points per channel
- Connectivity with Open Windows® XP, 6 USB connectors, LAN, and GPIB

Common features across the PNA Series

- **Flexible user interface:** hard keys, soft keys, and pull-down menus
- **Up to 10 markers per trace**
- **32 measurement channels and unlimited traces**
- **State-of-the-art calibration capabilities**
- **On-line Help**
- **Configurable test set available on all models**
- **Linear, log, power, CW, and segment sweep**
- **Equation editor and time-domain analysis**
- **Quick access for ECal and other USB devices**

The PNA-X integrates a 10.4 inch high resolution display with a touch screen, which provides a crisp view and easy access to all data and traces. This enhanced user interface allows intuitive operation and helps you set up complex measurements quickly.

www.agilent.com/find/pna
PNA-X – The premier-performance microwave network analyzer

The industry-leading performance and highly integrated configurable nature of the PNA-X make it the ideal solution to address active device measurement challenges. The PNA-X enables engineers to stay on the leading edge of component testing.

High quality synthesizers

- 10 MHz to 26.5 GHz
- Internal 2nd source for IMD, hot-$S_{22}$, and high speed swept-LO measurements
- High output power and wide power-sweep range for testing amplifiers
- Excellent harmonic performance for accurate harmonic and IMD measurements

Sensitive and linear receivers

- High compression point for improved dynamic accuracy
- More sensitivity for pulsed S-parameter measurements

Friendly user interface

- Large 10.4 inch touch screen display
- Click-and-drag markers and zoom

Exceptional flexibility

- Built-in signal combiner for easy IMD and hot-$S_{22}$ measurements
- Easy pulsed measurements with internal pulse modulators and pulse generators
- Flexible signal routing via internal switches for adding external filters, pre-amplifiers, and additional test equipment
- Front-panel jumpers for direct access to test-port couplers and receivers
- Source and receiver attenuators with 5 dB increments for better measurement optimization
- Built-in bias-tees simplify amplifier evaluation
- Three sets of triggering lines for complex test systems

www.agilent.com/find/pna
Mixer measurements

**Checklist**
- Conversion loss/gain, magnitude and phase
- Input match, output match, and **LO match**
- Isolation and compression
- **The two internal independent synthesizers** with +13 dBm power and < 60 dBc harmonics eliminate the need for external synthesizers or components.
- Advanced error correction
  - Patented vector-mixer calibration for measurement of absolute group delay
  - Scalar-mixer calibration (SMC) for match-corrected amplitude measurements
- Significantly faster speed for fixed-IF (20 to 30 times faster than with an external source)
- Easy-to-configure multi-stage converter measurements
- LO source control and LO power calibration
- Mixer IMD
- The simple **two-step** SMC calibration provides **match-corrected conversion loss, error-corrected input and output match**
## Amplifier measurements

The PNA-X is an ideal tool for measuring amplifier specifications, from gain and return loss, to harmonics and IMD.

www.agilent.com/find/pna
PNA-L – Advanced capability at an affordable price –
Passive and active devices, On-wafer test

The Agilent PNA-L is designed for your general-purpose network analysis needs and priced for your budget. With the same firmware as the PNA, the PNA-L offers the perfect balance of value and performance. PNA-L provides efficiency and flexibility in both manufacturing and R&D applications, for industries ranging from wireless LAN component production to aerospace and defense.

### Basic measurements

**Checklist**
- ✔ Insertion loss, gain, return loss, isolation, group delay, compression, both magnitude and phase
- ✔ Connectorized, in-fixture, or on-wafer
- ✔ Fast and accurate
- ✔ Reliable and repeatable
- ✔ Affordable

### On-wafer measurements

**Checklist**
- ✔ Class of TRL calibrations for accurate measurements
- ✔ Differential measurement capabilities with integrated multiport network analyzers
- ✔ Accurate power control and de-embedding algorithm for device characterization
- ✔ Compatibility with on-wafer calibration software for a total solution

Use TRL calibration for accurate in-fixture, on-wafer, or waveguide measurements.

www.agilent.com/find/pna
PNA-L – Speed and accuracy you can count on –
Balanced/differential measurements and multiport test

Easily measure single-ended, balanced, and mixed-mode S-parameters, in addition to ratioed and unratioed receiver measurements.

New multiport components require complicated test plans. Multiple port combinations must be tested over several frequency bands, resulting in lengthy tests. To reduce test time and lower costs, the PNA-L and test set combinations have been designed for high-speed measurements. To further simplify complex test requirements, up to 32 independent channels are available, eliminating the need for recalling instrument states.

Adding a 4-port test set expands the 4-port PNA-L to an 8-port system with full 8-port measurement capabilities.

### Differential measurements

**Checklist**

- Single-ended, balanced, mixed-mode S-parameters
- Ratioed and unratioed measurements
- Mode-conversion analysis
- True-mode stimulus measurements

### Multiport measurements

**Checklist**

- Multiport configurations optimized for your device, including full cross-bar
- Quick-Short-Open-Load-Thru (QSOLT) for fast, multiport cal
- N-port calibration for accuracy and ease-of-measurements
- Test-set control part of PNA firmware
- 32 independent channels for fast measurement speed

www.agilent.com/find/pna
PNA – The solution for your mmwave needs

The N5250A PNA-based mmwave system has superb dynamic range. Shown here is the $S_{21}$ of a filter at 94 GHz, compared to the 8510XF.

Millimeter-wave measurements

- **Checklist**
  - PNA-based 10 MHz to 110 GHz bench-top system, extendable to 325 GHz
  - Compact test-heads and two built-in synthesizers, for up to 110 GHz
  - Highly stable systems
  - No external synthesizes to 325 GHz, when used with PNA-X
  - Supported applications – pulsed-RF, antenna, and on-wafer

Time-domain analysis

- **Checklist**
  - Locate and resolve mismatches in the fixture, cable, or transmission lines
  - Use gating to remove unwanted responses
  - Fault-location

www.agilent.com/find/pna
PNA Series simplifies measurements –
When the requirements are difficult

**Modeling, PLTS, Antenna, Materials test**

### High-frequency design and modeling

**Checklist**

- PNA drivers included in Connection Manager for easy connectivity
- Simple downloading of S-parameters into ADS for simulation
- Save “.s2p, .s4p, snp” files and import into ADS
- Modeling of devices using IC-CAP and PNA network analyzers

### Physical Layer Test Systems (PLTS)

**Checklist**

- RLCG model extraction and eye-diagrams
- High-speed differential interconnect design
- Multiple aggressor differential crosstalk

### Antenna measurements

**Checklist**

- 16,001 points per channel
- Fast measurement speed, 4.5 µs/pt
- Forward and reverse sweeps for near-field scans
- High-sensitivity

### Materials measurements

**Checklist**

- Measurement of dielectric and magnetic properties
- Viewing of data in real, imaginary, loss tangent, and Cole-Cole formats
- Availability of a variety of techniques to meet your materials needs

**Legend**
- • Solution available
- Blank Solution not available
- Good and superb Solution available, quality of solution qualified. For example, with maximum output power levels, all PNAs have output power, but the PNA-X has the highest output power.

1. 4-port PNA-L has one source attenuator. 4-port PNA-X has 4 source attenuators.
2. Applicable to high-power amplifier testing or integration of the external test equipment.
Calibrating network analyzers is critical for high accuracy measurements and can be particularly challenging in non-coaxial environments such as fixtures, wafers, or waveguides. Additionally, 3- and 4-port devices are more prevalent than ever and require more sophisticated calibration procedures. The need has never been greater for calibration tools that are more accurate and easier to use. The PNA’s state-of-the-art calibration techniques help solve these challenges, enhance ease-of-use, and improve accuracy.

### High-performance ECal modules
- High-performance ECal modules, 10 MHz to 26.5 GHz, 10 MHz to 67 GHz and more
- Nine connector types, mixed-connector modules
- User characterization for adding adapters

### Calibration for non-insertable devices
- Unknown through calibration
- QSOLT and n-port calibration (6-port, 8-port, 12-port, etc) for multiport test systems
- Databased-model and expanded math calibrations for highest accuracy

### In-fixture measurements
- Frequency response cal, 1-port cal, 2-port cal, enhanced response-cal, TRL/TRM cal and adapter-removal cal
- An easy-to-use uncertainty calculator, and a comprehensive application note on calibration standards
- Automatic port extension removes loss and delay for in-fixture devices

### Advanced mixer and amplifier calibrations
- The patented vector mixer calibration and the popular scalar-mixer calibration
- De-embedding of attenuators and the new fast source power calibration technique for amplifier measurements
- De-embedding of probes and waveguides in mixer measurements

Learn how to set up a custom calibration kit with application note 1287-11, Specifying Calibration Standards and Kits for Agilent Vector Network Analyzers

www.agilent.com/find/pna
PNA - The standard for accuracy

All the network analyzers in the PNA family are known for their high-levels of stability, contributing to accurate calibrations and measurements. With the PNA-X, users can benefit from exceptional levels of dynamic accuracy. For users in non-linear environments, the PNA’s Scalar Mixer Calibration provides a higher level of measurement accuracy.

**Stability of a 20 GHz PNA over a 30-hour period**

It is clear that the more stable the hardware, the better the calibration, since it can correct the errors better. The calibration will remain stable as a function of time and temperature, and calibrations will not need to be updated as often.

**Typical dynamic accuracy of a PNA-X, with –20 dBm power**

If you are measuring a device with 20 dB insertion loss, the contribution of the dynamic accuracy error (receiver linearity) is less than 0.01 dB.

**Scalar-mixer calibration versus a simple power meter/receiver calibration**

Note the effects of mismatch that are corrected for by SMC.

**110 GHz PNA drift over a 24-hour period**

As you can see on the graph, the 110 GHz PNA drifts less than 0.7 dB, after 24 hours, at 110 GHz. Agilent’s 110 GHz PNA system is the most stable mmwave system in the industry.

Remove all doubt

Our repair and calibration services will get your equipment back to you, performing like new, when promised. You will get full value out of your Agilent equipment throughout its lifetime. Your equipment will be serviced by Agilent-trained technicians using the latest factory calibration procedures, automated repair diagnostics and genuine parts. You will always have the utmost confidence in your measurements.

Agilent offers a wide range of additional expert test and measurement services for your equipment, including initial start-up assistance onsite education and training, as well as design, system integration, and project management.
